

Let's say NO
to dengue

Wash with soap and a brush: buckets, basins, pots, vases, water dishes for pets, and any container that collects water where a mosquito could reproduce.

Cover all containers that collect water with a lid.

Turn over buckets, barrels, flowerpots or any object that collects water where a mosquito could find a place to lay eggs. Store and protect these items from the rain.

Discard unused bottles, cans, tires and pots that could collect water.
